Hard Drive & Configuration Protection

Remote Management for Cornerstone, DriveShield, MacShield & CenturionGuard

CompuGuard Control Center is an advanced remote management program for deployment, administration, and licensing of Centurion Technologies' Instant Restore products. CCC manages DriveShield™, MacShield™, CenturionGuard® and Centurion Technologies' new CompuGuard Cornerstone™ software for Windows.

CCC offers the Administrator a fast and efficient tool to:

- Register, allocate, reassign and transfer licenses.
- Automate and customize settings of client side desktop/laptop protection.
- Establish auto-updates of Centurion's applications.
- Utilize advanced management features to remotely manage multiple settings.
- Auto schedule all control features.
- Integrate with third party security updates.

With CCC, administrators are able to turn the instant restore protection on and off, reboot protected machines, manage passwords, initiate shutdown & wake-on-LAN actions, establish client groups and filtering criteria, broadcast Centurion updates and automate administrator actions... all from a single remote location. CCC's design and build provides the administrator familiar and trouble free management of a few computers... or thousands.

REBOOT & RESTORE TO YOUR SAFE CONFIGURATION!

LICENSE MANAGEMENT

License Management

Administrative management of Centurion licenses. Push and pull Centurion licenses as needed. Easily view order information and license status at all times.

Cross-platform compatibility

CCC is able to control machines protected with CenturionGuard, DriveShield, MacShield and CompuGuard Cornerstone protection.

New Registration Mechanism

Simple and clear license registration.

DEPLOYMENT FEATURES

Command Line or GUI Install

Allows the administrator to custom automate the installation via Command Line or GUI.

Network Update – Auto or On-Demand

CompuGuard client machines look for updates automatically or on-demand. Eliminates the need to “manually” reinstall each client for updates.

Custom Install Support

Allows administrator to set desired install parameters and auto-deploy the same setup to multiple workstations.

SERVER-SIDE REMOTE ADMINISTRATION

Centralized or Decentralized Remote Management Option

Use one or multiple CCC interfaces (per lab, per site, etc.). Each CCC can be set to view and/or manage any or all other interfaces as needed.

Client Grouping & Filtering

Administrator can establish filtering criteria (enabled clients, disabled clients, license status, and more) and send remote management actions to one or many groups.

Remote Execute

Ability to 'push' or install applications, updates, etc. to any CornerStone client via the CCC.

Shutdown & Wake on LAN

Shut down and “wake” client machine real-time or scheduled.

Broadcast Software Updates

Remote Administration server can download and broadcast updates to client machines.

Command Line Server

Administrator options to automate admin actions via command line or GUI providing ability to automate admin actions.

CCC Client Move Feature

With the click of a button, move clients from one CCC management interface to another when using CCC for Multiple Interface viewing and management.

Disable Keyboard and Mouse

Administrators can prohibit the use of the clients' keyboard and mouse when protection is disabled or during maintenance.

Logging

Advanced client log with filtering options
